

Task 1: Botanical Productivity App

1. Project Overview

A Pinterest-worthy To-Do List application built in multiple flavours: a desktop GUI using Python and CustomTkinter, a web app using HTML, CSS, and JavaScript, and an advanced Pro desktop version built with Tkinter and OOP architecture.

2. Screenshots

The screenshot shows the 'New Task' form. The header is green with the text 'New Task' and 'Fill in the details below'. The form contains the following fields and controls:

- Task title ***: A text input field with a placeholder 'What needs to be done?' and a small plant icon.
- Note (optional)**: A text area with a placeholder 'Add a note...' and a small plant icon.
- Category**: A dropdown menu with 'Work' selected.
- Priority**: A dropdown menu with 'Low' selected.
- Due date (optional)**: A text input field with a placeholder 'dd-mm-yyyy' and a calendar icon.
- Buttons**: 'Cancel' and 'Save Task' (with a small plant icon).

3. Features

- Soft pastel themes with animated floating leaves
- Categorized task management (Work, Personal, Study, Health)
- Search and priority coding with auto-save to localStorage/JSON
- Due date management with overdue detection
- Advanced Pro version features OOP architecture, tkcalendar, and statistics dashboard

4. Challenges & Solutions

- Challenge: Managing state synchronization between UI elements and local storage.
Solution: Implemented a robust data manager that writes JSON on every update and reloads state efficiently.

- Challenge: Creating aesthetic UIs in Tkinter.
Solution: Used CustomTkinter to bypass traditional limitations, creating rounded corners and gradient backgrounds.

5. What I Learned

- Learned to utilize CustomTkinter for modern desktop UI development.
- Gained experience in implementing Object-Oriented Programming (OOP) for GUI applications.
- Improved skills in vanilla HTML/CSS/JS for standalone web implementations.
